

Identity & Access Management (IAM)

BROCHURE

WE'RE SPHERE

Accelerate and automate risk reduction with strong, ongoing protection

Escalating threats. Greater risk. More critical data.

The need for identity-first protection isn't optional anymore. It's mandatory. At SPHERE, we help our clients strengthen security, protect their data, ensure compliance—and achieve ongoing Identity Hygiene.

Identity and Access Management (IAM) comes down to knowing *who has access to what, why, and when*—at all times. It may sound simple, but as any organization operating in today's complex, threat-rich environment knows, it's not. Our clients turn to us as a trusted partner in their cybersecurity efforts and rely on our solutions as critical elements in their IAM programs.

We feel your pain—and have your back

SPHERE is more than a cybersecurity leader and risk-reduction innovator. Yes, our SPHEREboard platform provides advanced technology, stringent controls, and ongoing reporting and monitoring. But we also have extensive in-house experience as *boots-on-the-ground* practitioners of risk reduction. So, we know the real-world challenges that you face when trying to protect your enterprise from ever-increasing threats.

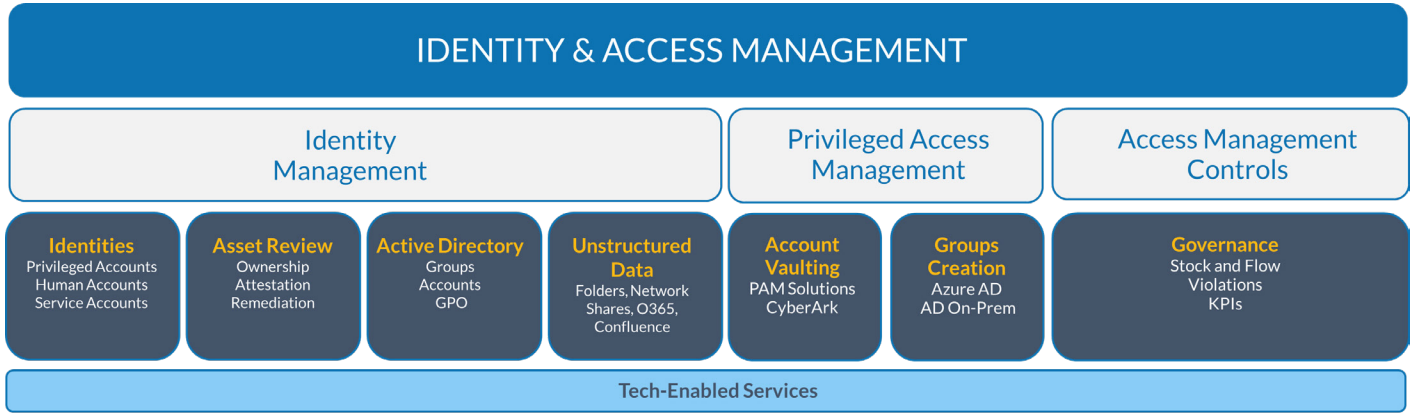

Our powerful solutions and tech-enabled services help reduce risk at all levels—controlling identities, remediating access, and protecting critical data.

ABOUT SPHERE

SPHERE is an award-winning, woman-owned cybersecurity business that is redefining how organizations improve security, enhance compliance—and achieve ongoing Identity Hygiene. SPHERE puts rigorous controls in place that secure your most critical data, create the right governance process for your systems and assets, and help keep your company compliant with all relevant regulations.

SPHERE & IAM

Here are just some of the ways that we can help you strengthen Identity and Access Management—and get the most value from your IAM solution:

Get a True View of Your Identities

SPHEREboard lets you take a closer look at your identities (including privileged accounts and nested groups), pinpointing the entitlements that they have and enumerating all of the different ways that an identity accesses applications and critical data.

Take Action to Reduce Risk

Using these deep identity insights, we help you pinpoint risk areas and remediate access—including limiting open access and implementing identity-based controls.

Confirm Your Controls

Establishing controls is just a first step. To ensure protection, these controls need to be followed meticulously. SPHEREboard provides governance oversight that confirms that your controls are working the way they should (e.g., mandatory password rotations every x days)—day after day, month after month.

Stay Protected

Our stock and flow reporting ensures constant vigilance, enabling your IT personnel to maintain a safe, least-privileged state on an ongoing basis.

SPHEREboard for Accounts

Bring clear visibility, fast remediation, and ongoing protection to your accounts, including important (but vulnerable) privileged accounts.

SPHEREboard for Data

Protect your critical data by discovering where it resides, accurately identifying ownership, and quickly remediating open and excessive access.
