

## Who We Are

SPHERE provides niche solutions in the form of specialized professional services, strategic software sales and custom integration.

When you engage with SPHERE you get the entire organization with a deep breadth of knowledge and experience around **Governance, Security and Compliance**.

SPHERE is an award winning, woman-owned technology firm headquartered in New Jersey with a global footprint. Having created a industry defining solution for performing analysis, remediating risks and delivering automated solutions, SPHERE is uniquely qualified to add value to any organization.

Honest      Credible      Passionate      Innovative

## What We Do

Experts at SPHERE have a highly specialized skill set that enables them to implement critical Governance, Security and Compliance initiatives in the most cost effective and timely manner. Whether the focus is on platforms such as Exchange or SharePoint, unstructured data on your file systems, or even access to servers or applications, SPHERE will help organizations meet critical technology and audit challenges.

SPHERE provides an understanding of the environment within an organization and can provide the blueprint on how to achieve control of information and assets.

SPHERE works with Fortune 100 companies to establish a data governance framework, close security gaps and meet stringent compliance requirements.

**You Have:**  
Data, Systems and Access

**You Need:**  
Governance, Security and Compliance

**SPHERE Will:**  
Assess, Plan, Remediate and Automate

*SPHERE provides unprecedented insights into your environment*

## Active Directory Evaluation

An Active Directory Evaluation is a rapid and effective service offering to gain critical insights into the state of your AD. Through this evaluation, you will learn about your environment and how to move to a cleaner, safer state. We will answer the following questions:

What are the objects and their potential use case?  
Who owns the various objects in AD?  
Who has elevated privileged permissions?  
What systems are vulnerable to security threats?

### Key Benefits of a Well-Functioning Active Directory:

- Reduce the possibility of security breaches from both internal and external sources.
- Lower costs, reduce effort and eliminate risk by automating error prone administrative tasks.
- Mitigate downtime and speed time to recovery.
- Increase efficiency by consolidating and aligning IT to the business.
- Ensure a least privileged access model is followed and enforced.
- Report, alert and track the “who, what, where, when and why” of changes.

#### How Does SPHERE do it?

By providing a deeper understanding of your current environment we can find the areas of concern and show your organization the optimal way of configuring, securing and maintaining your Active Directory environment.

You will know what you have, who has access and how your environment is configured.
